Sequence 16452, Application US/09949016

Patent No. 6812339

GENERAL INPORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

PILLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

PRICH REPERENCE: CL001307

CURRENT APPLICATION NUMBER: US/02/941,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

SOFTWARE: PSECIE OF WINDOWS Version 4.0

SEQ ID NO 16452

LENGTH: 52971
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    285
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              139

This is the 5. sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKZZ), Email 8.wiemann@dKz-heidelberg.de;
sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing
consortium of the German Genome Project.
No 81 sequence available.
This clone (DKZZp686K11227) is available at the RZPD in Berlin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CR749384 8056 bp mRNA linear HTC 19-AUG-2004
Homo sapiens mRNA; cDNA DKFZp686F02110 (from clone DKFZp686F02110).
CR749384
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de; sequenced by DKFZ (German Cancer Research Center, Heidelberg/Germany) within the cDNA sequencing consortium of the German Genome Project. This clone (DKFZp686A24102) is available at the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany. Please contact RZPD for ordering: http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZp686A24102 Further information about the clone and the sequencing project is available at http://mips.gsf.de/projects/cdna/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .066 CCATGCCCAGCTAATTAAAAAATTTTTTTTTTTTAAAGATCGGGTCTCACTGTATTGAC 1007

//pote="Organ: mixed (see below); Vector: pT7T3D-Pac
//pote="Organ: mixed modified polylinker; Site: 1: Not I;
Site 2: Eco RI: Equal amounts of plasmid DNA from three
normalized libraries (melanocyte 2NbHM, pregnant uterus
NDHPU, and fectal heart NDHH19W) were mixed, and ss circles
were made in vitro. Following HAP purification, this DNA
was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from pools of
5,000 clones made from the same 3 libraries. The pools
consisted of I.M.A.G.E. clones 260212-265223,
340488-345479, and 484488-489479."
